## **Introduction**

The commercial feed law in Kentucky was first enacted in 1906. Currently, the feed law provides protection for the state's livestock and poultry industry, and pet owners. The feed law regulates any materials offered for sale as feed or for mixing into a feed. However, whole and unprocessed grain, raw meat, hay, straw, stover, silage, cobs, husks, and hulls when unground and not mixed with other materials are exempt. More familiar products regulated include all types of pet foods, livestock minerals, complete animal and poultry feeds (bagged or bulk), protein blocks, supplements, feed ingredients, and some specialty materials such as drug premixes, vitamin and mineral supplements, liquid feeds, pet supplements, and specialized pet foods.

Periodic revisions have added additional legal requirements in response to more varied livestock feeding practices, changes in feed manufacturing technology, and an increased number of potential feed ingredients. These revisions are ensuring safe and effective use of drugs including authority to inspect mills for compliance with good manufacturing practices (GMP's). Any drug and feed additive use must conform to Food & Drug Administration (FDA) regulations. A major aspect is to prevent unsafe residues in human food that may result from misused or contaminated feed. Several provisions are aimed at keeping poisonous and deleterious substances from being distributed in feeds.

Functions of the feed law are to inform and protect the feed purchaser, provide an atmosphere for fair and equitable competition, and assist in assuring the safety of animal and human food. Registration of all feeds offered for sale is required before distribution to ensure that required label information is provided to the purchaser. This annual review of approximately 10,000 labels evaluates the guaranteed analysis, ingredient statements, and feeding directions for the intended animals or pets. Medicated feed labels are reviewed for approved drug usage and dosage, statement of drug purpose, and any required warning, caution, or special feeding instructions. Misleading and unsubstantiated information or claims are prohibited. Approximately 15,000 different commercial feeds and pet foods are registered for distribution by 915 feed companies. There are approximately 260 manufacturing facilities that serve the Kentucky feed and pet food industry with complete feeds, feed ingredients, or distribute their own private label products.

## **Inspection and Sampling**

Regulatory inspectors conducted approximately 1,800 inspections of feed manufacturers and retailers of bagged and bulk feed to monitor the distribution of over two million tons of commercial feed. Official samples were collected of 3,829 feeds from over 500 retail and manufacturing facilities to determine compliance with label guarantees. Sixty percent of the samples were obtained at the dealer, 34% at the manufacturing site and 6% at other locations. Of the nineteen thousand tons sampled, 68% of the samples represented bagged feed, 19% bulk feed, 1% liquid feed, 1.25% blocks and 10.75% other.

Samples were collected from 61 different types of commercial feeds including complete feeds, supplements, premixes, feed ingredients and pet foods.

Dog and cat food product labels must include a nutritional adequacy statement to indicate if the product is a complete and balanced feed for maintenance, growth and reproduction or all life stages. The AAFCO Dog and Cat Nutrient Profiles are utilized to evaluate adequacy for the specific life stage claimed. If a guarantee was not made and noted on the label for calcium, phosphorus, salt, copper, iron, magnesium, manganese, potassium and zinc, then the appropriate AAFCO Dog or Cat Nutrient Profile is utilized for dry, canned and soft-moist products to ensure that the food is providing adequate nutrition. This extensive testing substantially increases consumer assurance that the pet foods available in the market place are nutritionally adequate.

### Feed Mill Inspections

The medicated feed program currently places feed mills into one of two classifications. One classification is for mills that mix Category II Type A medicated feed articles. To purchase these drug sources a mill must be licensed with FDA. The second classification is for mills that mix drugs commonly referred to as exempt. Purchase of these drugs do not require a FDA license. All mills must comply with good manufacturing practice regulations. Four inspections of licensed mills were conducted as part of a national program by FDA. These inspections ensure that drugs mixed in feed are safe and effective for livestock and poultry. Additionally, the regulations play a major public health role in maintaining the wholesomeness and safety of the food we consume.

## BSE Rule Inspections

The Division participated in a national program conducted by FDA to ensure compliance with the BSE Rule. These regulations are designed to prevent the establishment and amplification of Bovine Spongiform Encephalopathy (BSE), sometimes referred to as "Mad Cow Disease," through animal feed. The regulation prohibits the feeding to ruminants certain proteins derived from mammalian tissue. Meat and bone meal containing rendered cattle tissue is a prohibited protein. Mills that receive prohibited materials must utilize adequate procedures to prevent their use in ruminant feeds. Prohibited materials are approved for use in non-ruminant feeds such as swine and poultry. Feeds that may contain prohibited material must bear the cautionary statement "Do not feed to cattle or other ruminants." The Division conducted 60 BSE Rule inspections under contract with FDA for the 2006-2007 fiscal year. All Kentucky feed mills and renderers have had at least an initial inspection and re-inspection by either our Division or FDA since 1998. All facilities that process feed containing prohibited protein are inspected on an annual basis.

**Table 1c.** Sampling numbers—Pet foods and specialty pet products.

	2006	2005	2004

Wild Bird Feeds	4	5	12
<b>Total</b>	<b>771</b>	<b>697</b>	<b>943</b>

## Food Safety

Feed contamination concerns feed manufacturers and regulatory officials due to its potential impact on the state's livestock industry and possible carryover to human food. Prevention is the ultimate goal and a rapid response to contain a problem can prevent it from becoming a major disaster. Feed industry personnel involved in receiving, manufacturing, and distribution are the first line of defense. Unusual occurrences such as feeds or ingredients with abnormal appearance, odor, or foreign material; or, reports of multiple livestock deaths or chemical leaks warrant immediate investigation. Regulatory Services inspectors and laboratory staff are available to assist with the investigation of suspected problems. GMP and BSE Rule inspections, label review, feed microscopy, drug and mycotoxin testing, and other feed control activities contribute significantly to the nationwide effort to maintain a safe food supply for consumers of meat, milk, and eggs.

## Financial

The feed regulatory program is supported by inspection and product registration fees paid on commercial livestock feeds and pet food sold in Kentucky. A fee of thirty-five cents per ton is paid on labeled complete feeds and supplements, non-exempt ingredients, and grain sold and mixed as part of a complete feed. Distillers by-products containing more than 75% moisture, brewers wet grains and whey distributed without further processing for livestock consumption pay five cents per ton. An exemption is provided for ingredients used to manufacture registered feeds and for farmer-owned grain used as part of a custom mixed feed. An annual inspection fee for a product sold exclusively in packages of 10 pounds or less is \$50 per product. During the 2006 fiscal year, the auditor and data processing personnel assisted firms to assure accurate reporting and payment of inspection fees totaling \$1,084,170.

## 2006 Highlights

**Testing**—The feed laboratory provides accurate analyses of several components in feed that are essential for a good feed regulatory program. Analysis is provided for over 50 different nutrients and components in feeds to evaluate their principal makeup, to detect any toxins, and to assess the presence and amount of any drugs. The laboratory reported results for crude protein, non-protein nitrogen, crude fiber, total fat, acid hydrolysis fats, vitamin A, lysine, several different drugs and antibiotics, thirteen different macro and trace minerals, aflatoxin, fumonisin, and vomitoxin.

**Product Suitability**—The 2006 findings from official feed samples were evaluated to ensure their results were within tolerances of the label guarantee, and the nutrient content was suitable for the intended use of the feed. National Research Council Nutrient Recommendations, Association of American Feed Control Officials guidelines, University of Kentucky scientists, and normal industry practices are utilized to evaluate sample results and assist feed manufacturers and distributors in insuring their feeds are nutritionally suitable for their intended purpose, and free of any deleterious substances.

A feed is considered adulterated if its labeling does not clearly list all of the components, if the feed contains deleterious substances or if any component is in excess of sound nutritional guidelines. This unique evaluation for suitability provides consumers of commercial feed and pet foods with sound information on which to base their purchases. Testing also verifies that feed ingredients listed as nutrient sources in feeds are present in the feed.

**Feed Labeling**—The feed label is the fundamental basis for providing consumer information and protection, equitable competition and regulation. Effective feed labeling is essential to accomplish these objectives. Regulatory efforts continue to assist manufacturers to provide informative labeling that promotes safety and usefulness of feeds for livestock production and companion animals. The Registration Specialist reviews product labels for regulatory compliance with both the Kentucky Commercial Feed Law and Federal Laws and Regulations. Area Regulatory Inspectors also aid in the process by assisting local feed manufacturers with product labeling, which results in a more accurate, informative, and uniform labeling throughout Kentucky.

A calculation program is available to assist local feed mills to determine the nutrient levels in their manufactured feeds. This information is helpful with establishing label guarantees and evaluating nutritional suitability. Example labels are provided to further assist the local mill to more efficiently generate a label for their commercial feed. We believe this process strengthened our excellent working relationship with the regulated feed industry and has helped us achieve a more compliant level of labeling to further benefit the Kentucky consumer.

**Product Registration Exemption**—The Kentucky Commercial Feed Law provides that qualified firms may be granted an exemption from the registration of each commercial feed prior to distribution in Kentucky. Currently, 19 firms have received an exemption based on their demonstrated ability to label feeds in conformance with labeling requirements. For further information on registration exemption, please contact the Division of Regulatory Services Feed Program Coordinator.

## **Mycotoxins**

Mycotoxins have become an increasing concern primarily due to the sensitivity of several animal species. Testing was conducted for aflatoxin, fumonisin, and vomitoxin during 2006. Our laboratory tested about 30% more samples than in 2005.

**Aflatoxin**—Our laboratory screened 386 feed samples for aflatoxin. The action level established by FDA for human food, dairy feed, feed for immature animals, and poultry is 20 ppb. Higher action levels (100 ppb) have been established for mature poultry, breeding age cattle and swine; a level of 200 ppb for finishing swine; and 300 ppb for finishing beef. About 2% of the samples were above action levels.

**Fumonisin**—This mycotoxin is known to produce equine leukoencephalomalacia in horses. Our laboratory screened 305 samples during 2006. FDA has established a guideline of 1 ppm for horses and rabbits; 10 ppm for swine and fish; 15 ppm for breeding age ruminants and poultry; 30 ppm for ruminants >3 months old; 50 ppm for poultry for slaughter; and 5 ppm for all other livestock and all pets. A few feeds for horses and some feed ingredients were found to contain above the action level.

**Vomitoxin**—This toxin is often associated with feed refusal of swine feeds containing wheat and/or oats. A total of 34 samples were tested and none exceeded the action level of 5 ppm.

*The data presented in this publication were compiled for analyses of official samples taken during 2006. The information is intended to acquaint the reader with activities of the feed regulatory program, and serve as an advisory tool to the purchaser of animal, poultry, and pet foods about feed products being manufactured and distributed in Kentucky.*

## Analytical Variations

Control officials use analytical variations (AV's) as a guide to decide if a product is in violation of the label guarantee. AV's for each ingredient or feed are determined from data generated by several laboratories participating in a nationwide Association of American Feed Control Officials check sample program. The AV's allow for the inherent variability in laboratory analyses. AV's do not allow for manufacturing or ingredient deficiencies or excesses. AV's used in Kentucky allow for the contributions of naturally occurring and added trace elements in mineral ingredients and feedstuffs. AV's are intended to apply to a single determination under routine laboratory conditions. When the results of analyses fall within the AV's, they are accepted as meeting the label guarantee. All samples in violation are retested prior to reporting the results. Each sample analysis report is carefully reviewed and both the past and the present manufacturer performance is taken into account before a judgment is issued.

The following AV's are employed for tests performed by the Regulatory Services laboratory:

Crude Protein.....	- 3% .....	+ 150%	Lasalocid .....	- 25%.....	+ 25%
