This report was compiled and prepared by G. Alan Harrison
with the assistance of the inspection, laboratory, and administrative staffs.

The Martin-Gatton College of Agriculture, Food and Environment is an Equal Opportunity Organization.

Introduction

Kentucky's commercial feed law (KRS 250.491-250.631) dates from 1906 and was last revised in 1996. This feed law provides protection for the state's livestock, poultry, and pet owners by regulating all feed materials offered for sale or for mixing into a feed. Products falling under regulation include all types of pet foods, livestock minerals, complete animal and poultry feeds, protein or mineral blocks, supplements, feed ingredients, specialty materials such as drug premixes, vitamin and mineral supplements, liquid feeds, pet supplements, pet treats, and other specialized pet foods. The law does provide for exemptions for whole and unprocessed grain, raw meat, hay, straw, stover, silage, cobs, husks, and hulls when not processed.

Revisions in law and regulations are primarily in response to more varied livestock feeding practices, changes in feed manufacturing technology, and new feed ingredients. We last revised our regulations in 2018, to better align with the American Association of Feed Control Officials (AAFCO) model bill and regulations. The next revisions to our regulations should occur in 2024 as we adopt AAFCO's recently approved Pet Food Label Modernization regulations.

Information in this report is intended to inform the feed purchaser, provide a basis for fair and equitable competition, and assist in assuring the safety of animal and human food.

Feed Mill Inspections

Maintaining high quality and safe feeds for animals requires a comprehensive inspection program. Mills may be required to obtain a license from the Food and Drug Administration (FDA) to manufacture medicated feed, depending on the type and concentration of drug. There are currently 8 feed mills in Kentucky with a feed mill license (FML) from the FDA. Currently, there are 45 feed mills in the state manufacturing

medicated feed but not requiring a license from FDA. All feed mills must comply with good manufacturing practices assessed as part of a comprehensive inspection program. The purpose of these inspections is to ensure several safe feed practices are as follows: (1) approved drug levels are used, (2) proper mixing procedures followed, (3) feed ingredients monitored, (4) good record keeping followed, (5) good housekeeping protocols followed, and (6) a recall plan in place.

The Division participates in an inspection program in partnership with FDA that conducts inspections of facilities manufacturing and distributing animal feed. In recent years, our inspection program has evolved to include more inspections involving two inspectors, a greater focus on manufacturers, and the addition of new inspections to evaluate progress of firms in meeting Food Safety Modernization Act (FSMA) requirements. Inspections to determine compliance with the rules in place to prevent the establishment and amplification of Bovine Spongiform Encephalopathy (BSE) are now limited to firms that manufacture feeds containing ruminant protein products. Our division continues to encourage compliance by Kentucky feed distributors with the Veterinary Feed Directive (VFD) rules that went into effect in 2017. Inspections at medicated feed mills include a review and evaluation of VFD records if the firm is a manufacturer of these feeds.

Our inspectors conducted 31 inspections in 2023 spanning the 2022-23 and 2023-24 contracts with FDA. Our current inspection contract includes evaluations of good manufacturing practices (GMP's) at 32 Kentucky mills annually with around half of these facilities manufacturing medicated feed. With FSMA regulations now including production of non-medicated feed, we are committed to conducting inspections for compliance with FSMA regulations at all Kentucky feed manufacturers in the next

few years. To date, nearly 90% of Kentucky manufacturers have been inspected under FSMA regulations. The current contract also includes preventative controls inspections at 12 of the 32 total inspection locations. All facilities manufacturing animal feed are subject to FSMA cGMP regulations but only about 40% of Kentucky manufacturers fall under the regulations covering preventative controls. At the end of 2023, there were

184 feed manufacturing facilities located in Kentucky that serve the animal feed and pet food industries. Additionally, 329 feed distributors located in the state handle livestock feed.

Food Safety

The goal of the Food Safety Modernization Act (FSMA), enacted in 2011, is to ensure the safety of the US food supply by

Table 1. Number of feed ingredient samples in 2023.

Total	1,629	127	1,756

shifting the focus of federal regulation from responding to contamination to preventing it. As of September of 2018, all facilities manufacturing or holding animal feed are required to comply with good manufacturing practices. By the fall of 2019, preventative controls were also required for eligible facilities. While we will continue to monitor the manufacture of medicated animal feed, we expect our inspection program to evolve to be more in line with FSMA philosophy. Our focus on educating before regulating will remain in place.

While preventing feed related problems is the best approach, there will continue to be occurrences with animal or pet food that need attention including abnormal feed color or odor, presence of a foreign material, animals refusing the feed, and sickness or death of animals. An investigation is warranted when any of these occur. Regulatory Services works in conjunction with the University of Kentucky Veterinary Diagnostic Laboratory, extension agents,

local veterinarians, feed dealers, and feed manufacturers, and take samples of feed when these incidences occur. Our continued emphasis on frequent inspections, regular sampling, laboratory analysis, label reviews, and inspections support efforts to maintain food safety and minimize any adverse impact.

Since September 2016, Kentucky has been one of a group of now 25 states participating in the Animal Feed Regulatory Program Standards (AFRPS) initiative, a joint effort by the American Association of Feed Control Officials (AAFCO) and the FDA to help build a more robust integrated food safety system by concentrating on regulation of animal feed production. Kentucky has fully implemented each of the 11 standards. From 2016 through June 2024, this cooperative agreement brought over \$4,000,000 into the division and the university. Implementation of these standards has strengthened our program and provided a defensible, sustainable pathway forward.

Feed Registration and Labeling

Manufacturers are required to register all feeds before distribution to ensure that correct label information is provided to the purchaser. Each year, we conduct more than 7,000 label reviews for products for animals or pets. Guaranteed analysis, ingredient listings, and feeding directions for the intended animals or pets are scrutinized. Particular attention is given to medicated feed labels with regards to approved drug usage and dosage, statement of drug purpose, and any required warning, caution, or special feeding instructions. Misleading and unsubstantiated information or claims are prohibited. Currently, over 24,000 different commercial feeds and pet foods are registered for distribution by nearly 1400 companies. More than half of these registered products are in the pet and specialty categories.

A feed label is the fundamental communication with the consumer; it provides purpose of the feed, directions for use, nutrient information, ingredient content, and special comments or warnings. Providing labeling assistance and guidance to product

registrants and manufacturers has been beneficial in attaining high quality feeds and promoting food safety. A full-time registration specialist reviews product labels for compliance with applicable laws and regulations. The field inspectors assist manufacturers with labeling, resulting in more uniform and informative labels. Additionally, spreadsheets are available to assist in establishing label guarantees and for estimating nutritional suitability of custom mixed feeds and even pet treats. These services strengthen an excellent working relationship with the feed industry in Kentucky.

Financial Support

The feed regulatory program is supported by inspection fees of the commercial feeds sold in Kentucky, registration fees for small package items, and General Assembly appropriated funds. An inspection fee of 35 cents per ton is paid on commercial feeds in packages of larger than 10 pounds. Distiller's wet grains, other distillers products of more than 75 percent moisture, whey and brewers wet grains distributed without

further processing pay a fee of 5 cents per ton. Products sold exclusively in packages of 10 pounds or less pay an annual registration fee of \$50 per product. In 2023, net income for the feed program was \$1,564,767 including inspection fees, registration fees and late payment penalties.

Feed Sampling

For Tables 1-3, we report both official samples with label guarantees and other samples. Official samples are those collected by our inspectors under guidelines specified by our sampling protocols. Other samples reported include unofficial samples, samples without label guarantees, lab proficiency samples, and other service samples.

Tables 1, 2 and 3 list the number of samples of feed ingredients, commercial feeds, and pet/specialty foods received by our lab in 2023. The majority of the ingredients sampled continue to be corn products (including corn grain and corn gluten feed), distiller's grains, and soybean products (soybean meal and soy hulls). Beef,

poultry, and equine feed were the largest categories of commercial animal feed excluding pet food. Pet and specialty foods accounted for 41% of all official samples with guarantees. Compared to 2022, our inspectors sampled 15% more ingredients and products in 2023.

In addition to the official samples reported, our lab also analyzed an additional 388 other samples. The samples include samples lacking guarantees collected by inspectors (primarily corn), ingredients and products submitted to our lab by county extension agents, the UK Veterinary Diagnostic Laboratory, livestock producers, and consumers. In 2023, our lab analyzed 70 service samples for Kentucky feed consumers, feed dealers, and manufacturers and 99 research samples submitted by researchers in the college.

Corn Quality Survey

Each fall, our inspectors collect corn samples from elevators and feed mills as new crop corn makes its way into the market. A total of 84 samples were tested for crude

protein, crude fat, fiber, and moisture and 52 samples were screened for mycotoxins. We did not find evidence of major mycotoxin issues with this year's crop (Table 4). Crude protein averaged 6.8% on the samples in this year's survey.

Feed Analysis

Analyses of nutrients and other components in feed samples are provided by our feed laboratory. The laboratory data are used to evaluate suitability of product labeling, feed quality, and presence of any contaminants or deleterious substances. Table 5 reports the number of feed analyses conducted on samples during 2023. Our sample report table by manufacturer or guarantor includes only official samples with guaranteed tests. However, results of testing for non-guaranteed analytes are also listed in sample reports to provide more information to the manufacturer/guarantor.

The feed program made a conscious effort to increase our mycotoxin testing and medication analyses in 2023. Our lab conducted around 122 mycotoxin tests in 2023. The majority of these tests were conducted on corn with additional on samples analyzed during investigations into product quality and/or animal health issues. Our lab analyzed 233 samples for medication levels compared to 193 samples tested in 2022.

Since 2018, our lab has had the capability to determine the presence of microbial contaminants, specifically listeria and salmonella. In 2023, we analyzed 45 samples for either salmonella, listeria, or both microorganisms. The primary focus for microbial contaminants is pet food, but we also analyze specialty and livestock products. Neither salmonella nor listeria was detected in any of the samples tested.

We continue with the use of NIR (near-infrared reflectance spectroscopy) as a screening tool with livestock feeds, ingredients, pet foods, pet treats, and specialty products. If the NIR scan indicates the sample does

not meet the guarantee of the analyte in question or the NIR value is questionable, the sample is analyzed by the appropriate wet chemistry method. As a screening test, we do not issue violations based solely on the NIR estimate. Analysis of minerals and medications continues via traditional wet chemistry methods. For sample reports, we report which analytes were estimated using NIR. NIR also has allowed the reporting of analytes that we do not typically measure in some feed types (for example, crude fat and crude fiber in poultry and swine feeds). For our lab, the advantages of using NIR as a screening test include both the speed of analysis with results available immediately and lower cost in both lab reagents and labor.

Tonnage Distribution

Tables 6 and 7 use data collected from the Kentucky Feed Tonnage Reports submitted by firms distributing feed products in the state. Table 6 reports ingredients and Table 7 reports commercial feeds. The term "exempt" represents ingredients sold to other feed manufacturers in Kentucky who pay the inspection fees. "Non-exempt" represents ingredients in which the reporting firm pays the inspection fee.

At nearly 2.59 million tons, the total ingredients and commercial feeds distributed reported in 2023 was just below 2022 volume of 2.60 million tones. Beef, poultry, equine, and dairy continue to be the largest volume categories of non-pet food commercial feed in distribution. Pet food volume has been climbing in the past 4 years and accounted for 22% of total tons reported in 2023.

Analytical Variations

Regulatory officials use analytical variations (AVs) as a guide for issuing any type of violation of the label guarantee. The total variation surrounding an analytical analysis of a feed product and comparing it to a

label consists of (1) variation associated with the formulation and mixing in producing a feed, (2) variation of particle sizes in feed ingredients, (3) potential ingredient settling during transport, (4) variation associated with sampling, (5) variation associated with mixing and grinding samples, and (6) variation during analysis in the laboratory. Most variations associated with sampling, mixing, grinding, and analysis in the laboratory are known as a result of many years of study to arrive at Official Methods. The AVs listed in Table 8 allow for the inherent variability in sources that follow the Official Methods, with more weight given to the areas of analytical variation. The laboratory reported value of an analyte in a sample is reviewed with respect to the guarantee using the AVs below as a guide. Our AV table is referenced in our updated regulations (12 KAR 2:021).

Note that the AVs listed for minerals do not apply to cat and dog complete foods formulated to meet Association of American Feed Control Officials (AAFCO) requirements. These complete pet foods must meet AAFCO pet food profiles. All profiles have minimum mineral requirements and some have maximums as well. In this case, the tolerances are national standards set by AAFCO.

Sampling Location Report

Table 9 contains a list of all Kentucky locations where inspectors collected samples in 2023. Samples were collected at 372 locations in 2023 compared to 363 locations in 2022.

Sample Violation Report

The sample violation report for 2023 (Table 10) includes the 3,173 official samples from 539 different manufacturers or guarantors. Overall, 77.6% of samples passed (no violations on any analytes) while 96% of all analytes met their label guarantees. When label violations are found, manufacturers or guarantors are requested to investigate and report their findings to the feed director. When violations have the potential to harm animals or consumers, our office has the authority to withdraw the product from distribution until the problem is corrected. Since September of 2021, our office has issued withdrawals from distribution for “major violations” when samples fail to meet guarantees for medications (deficient or excessive), selenium (deficient or excessive), copper (excessive), salt (excessive), and non-protein nitrogen (excessive). In 2023, our office issued 75 withdrawal from distribution orders after identifying major violations in products sampled (10.5% of all violative samples). We are pleased to report that the response rate from guarantors to violations has improved dramatically over the last couple of years. In 2023, we received responses to 66% of all violations and 79% of all major violations.
